PREMIUM LIGHT

The TAGIT Premium light System is manufactured using acrylic material. It has a translucent look, being highly resistant to wearing. Using its patented 3D detection it produces high level detection in all three label orientations. The aisle width depends on the configuration and the on-site electrical noise level.

This system is designed for the protection of confidential documents at high-tech companies and government institutions, items for libraries, archives and retailers.

Standard colors are white and black. Other colors are available in accordance with customer request.
