LYNGSOE SELF-OPERATED LIBRARY™

SECURE ACCESS CONTROL TO LIBRARY SERVICES

ACCESS 24/7 FOR PATRONS

Lyngsoe Self-Operated Library™ is a solution that makes it possible to extend the library's normal open hours without staff being present. It is a complement to the existing manned hours, in which library users can still receive the necessary help and guidance. In short, it is a service that allows library users to gain access to the library's facilities when it suits them.

EASY ACCESS TO THE LIBRARY

The robust and easy-to-use entrance unit is the first step in welcoming patrons to an extended service experience during unmanned opening hours. The unit can be configured for the individual library, up to 24/7.

ADVANCED MANAGEMENT SYSTEM

Specially designed software controls all units of the system. The advanced management system enables the automatic opening and closing of the library, including door locks, lights, announcements, and turning off electronics. It also integrates with your library system and uses information from the existing user database. This provides greater security and access control to the self-operated library.

BENEFITS

- Reduces staff workload
- Violence-proof
- Weather-proof
- Centralized management
- User friendly administration software
- Integrates with our other products
- Integrated hardware all-in-one unit

LYNGSOE SELF-OPERATED LIBRARY™

CONTROL ACCESS

Our custom-designed entrance computer identifies and registers the users upon arrival at the library. The users enter their PIN after scanning their library card in the card reader.

The large safety-glass screen provides space for the library to communicate information to the patrons and language options. The screen provides guidance to the patron along with any reason for rejection. Library hours can also be displayed as a reminder for the patron before entering.

MONITORING FOR SAFETY

Camera surveillance is an integral part of the solution. This provides safety for the users and protects the library against theft and vandalism during the self-operated opening hours.

By utilizing our management application you can easily manage Lyngsoe Self-Operated Library. Through the system you can access and edit your data, including the opening hours, surveillance images, event log and much more. The management application ensures you full control of the system and all events during the unmanned opening hours.

STATISTICS MODULE

The management package contains several features that provide an overview and insight into the system. Among the features available to you is a statistics module from where you can extract data concerning the number of visitors at the library time interval, and a PC-module from where you will be able to automatically manage the library's computers, and many more.

OUR SOLUTION INCLUDES:

- Entrance unit where the users let themselves in by using their library card or smart phone or pincode
- Software that ensures automatic alarm control, door locks, lights, announcements, PC management, intelligent video surveillance and connections to third-party systems (building management system and external alarm system)
- User-friendly administration software that is easy to use by the library staff and does not require a professional IT skillset.
